# Wickr

Wickr is the most trusted collaboration platform in the world. Why?

Complete Security

Wickr protects all of your communications with 256-bit end-to-end encryption developed by leading U.S. experts. A new random key is created for every call, message, or file, and even Wickr can't access the decryption keys. With our zero trust platform design, your communications are completely secure from any foreign or domestic threats.

Total Compliance

Wickr allows you to secure your communications while remaining totally compliant with industry regulations. While most working-level communications should never be stored for security purposes, some information must be maintained for HIPAA, FINRA, FOIA, FRA, e-discovery, auditing purposes, and more. Wickr allows organizations to selectively log communication sessions to a secure customer-defined data store when required.

Full Control

Wickr gives you full administrative control over your data, allowing you to take charge of your own security. Control permissions, set expiration timers, define security groups, and ensure that your setup is specifically tailored to your organization. In addition, Wickr comes ready to integrate with services like Active Directory, SSO via OIDC, MDM, and more.

Features & Capabilities

1:1 and Group Messaging
Create secure rooms with up to 500 members

Audio and Video Calling
Conference with up to 70 people

Screen Sharing and Broadcasting
Present with up to 500 participants

File Sharing and Saving
Transfer files up to 5 GBs with unlimited storage

Administrative Controls
Tailor your setup for your organization

Configurable Ephemerality
Control expiration and burn-on-read timers

Advanced Layered Security
Nobody, including Wickr, can access your data

Global Federation
Connect with Wickr users outside of your network

Wickr Stands Up Against the Competition
